

**BACKGROUND:** To protect staff, facilitate infectious disease evaluations, and conserve PPE, many hospitals have made the decision to admit all COVID-19 positive patients to specialized COVID-19 units. Many of the staff on these units will not have stroke care training. Stroke guidance documents for stroke best practices have been developed to support staff unfamiliar with managing acute ischemic and hemorrhagic stroke patients. This information is intended to be "guidance rather than directive" and is not meant to replace clinical judgment.

## Acute Stroke Care Timelines (CSBPR, 2018)

|   | Within 24 hours:<br>• Complete Dysphagia screen  |
|---|--|
|   | *Complete Dysphagia screen   |
|   |  |
|   | Within 48 hours:   |
|   | Initiate initial assessment as soon as possible after admission.   |
|   | <ul> <li>Prior to assessment, review activity orders (e.g. bedrest after procedure such as EVT), blood pressure parameters and NIHSS.</li> </ul>   |
|   | Initiate discharge planning  |
|   |  |
|   | Within 72 hours:   |
|   | • Complete and document assessments to help determine type of ongoing post-acute rehabilitation needs including tolerance, participation and ability follow direction.   |
|   | • Complete AlphaFIM on or by day 3 after admission (target day 3, admission day is day 1) to hospital. You must be credentialed to complete the alphaFIM. (Reminder: patients on droplet isolation are scored as "non-walkers"). |
| 4 |  |
|   | • Submit rehab application as appropriate. Champlain Region Stroke Landscape: <u>https://crsn.ca/en/about-us</u>   |
| / | • For patients who do not initially meet criteria for rehabilitation, monitor and complete weekly reassessment of rehabilitation needs.  |
| ļ |  |
| _ |  |
|   | • Deliver timely and comprehensive information, education and skills training to all patients and their family members/informal caregivers.  |
| / | <ul> <li>Provide every patient with a "Your Stroke Journey" booklet from Heart and Stroke</li> </ul>   |
|   |  |

This document is meant to support staff who may not have experience working with the acute stroke population and provides a summary of the typical process and resources required to support patients admitted to hospital following stroke. V3 - Updated January 2022

| Торіс                                 | Key Messages (for more information go to www.strokebestpractices.ca)  | Where to Find More Information  |
|---------------------------------------|---|---|
| Assessments                           | Assessment components in OT should include mood and cognition, mobility, functional assessment and activity limitations, skin breakdown and discharge planning (incl. role participation restrictions and environmental factors), while making evaluation of safety (cognition, fitness to drive, mobility) a priority. | Stroke Engine - Assessments   |
| Cognition and<br>Perception           | Patients with stroke and TIA should be considered for screening for vascular cognitive impairment, using a validated screening tool such as the MoCA – can be done in acute care, particularly if cognitive, perceptual, or functional concerns, in the absence of delirium is noted.                                   | <u>Stroke Engine – Star Cancellation Test</u><br><u>Stroke Engine – Line Bisection Test</u><br><u>Stroke Engine - Clock Drawing Test</u><br><u>MoCA</u> |
|                                       | All patients with stroke should be screened for visual, visual motor, and visual perceptual deficits – can be done in acute care if deemed indicated/necessary, or in rehab. Visual scanning techniques should be used to improve perceptual impairments caused by neglect.   | Apraxia handout for families and caregivers<br>Neglect handout for families and caregivers  |
| Positioning and<br>Upper<br>Extremity | Spasticity and contractures may be managed by antispastic pattern positioning, ROM exercises, and/or stretching.  | Patient infographics on <u>pain</u> and <u>spasticity</u><br>OT sitting position poster for hemiplegia  |
| Management                            | Joint protection strategies should be applied during the early or flaccid stage of recovery to prevent or minimize shoulder pain and injury, including positioning, protecting and supporting the arm at all times.   | OT bed positioning poster for hemiplegia<br>Hemiarm Protocol (includes other positioning<br>posters)  |
|                                       | The use of slings should be discouraged with the exception of the flaccid stage. In this case a sling is worn whenever support at the shoulder cannot be provided (i.e. transfers, ambulation and when sitting on toilet).  | Winnipeg Regional Health Authority - Evidence<br>Based Occupational Therapy Toolkit for<br>Assessment and Treatment of the Upper                        |
|                                       | Patients and families/caregivers should be educated to correctly protect, position and handle the involved arm.   | Extremity Post Stroke (includes other positioning posters)  |
